Chiba Central Medical Center
Providing safe and secure medical
support to the community.

インターンシップ

2024年 5月2日(木)

開催時間：10時～16時

※限定10名

参加者には
交通費(片道)支給
昼食付き

Chiba Central Medical Center is a comprehensive medical facility that does not just serve the city of Chiba, but also the surrounding community. From acute emergency treatment to long-term rehabilitation, we at CCMC are committed to providing the best possible medical care over a wide range of medical fields with our advanced medical facilities and highly skilled staff.

Based on our philosophy of "Reliability and Contribution", we continue to hold building a trustworthy relationship with our patients and their families to the highest value, actively contributing to the region by providing many medical services including emergency care.

To further improve our medical care functions, we have established four specialized in-hospital centers in addition to our normal practice, including the Diabetic Center, Spine & Spinal Cord Center, Cardiovascular Center, and Cerebrovascular Center. These centers have developed a reputation for offering satisfactory and high-level medical care by exceeding the expectations of our patients and the wider community.

CCMC puts a strong emphasis on the importance of clinical training. As a general training hospital, we focus on instructing and encouraging resident physicians and surgeons, as well as other medical care personnel. Furthermore, we have created a learning environment that promotes a high degree of satisfaction to all who train and work at this hospital.

To address the growing importance of medical safety, CCMC has established the Medical Safety Policy Management Team to fully ensure the best possible safety management through all aspects of patient care. In order for us to continue offering safe and effective medical treatment to our patients, we encourage our patients and those close to them to actively cooperate in the treatment process.

We at CCMC will continue steady efforts to fulfill our philosophy of "Reliability and Contribution" as a hospital that provides safe and secure medical care for our patients, and to contribute to the region.
